Size: 5.2 MB I think this could be a cracked hlm-gtasa, not a copied. A: Yes, it's definitely a cracked version of hlm-gtasa. Since cracked RARs usually start with a part01, the part-number-part-name combination here means that it is part of the series of "part08" that you have. This kind of crack is often identified by the shortened version of the filename, hlm-gtasa.part08, in comparison to the full filename. // WARNING: if you have children then they might have found a new // version of your local 'tools/cxx.py', which (if not // clear) is going to cause this command to fail. // #define SYNTAX_ERROR_FROM_STRING(str) \ { \ std::stringstream stream; \ stream
