This software is an original and proprietary product of M4 Technologies. This software is owned by Schlumberger License Server. A: The tools in the geology and petrology topic in the software pack are direct descendents of the SIS software. You can find more information on: If you are using SIS you will need to upgrade your license server to make use of the new methods. The new methods will be installed along with SIS 2015.1. IMPORTANT: The license server for SIS 2015.1 cannot be installed from the release given in the question. If you use any SIS 2015.1 product release, including ECLIPSE, you must upgrade your Schlumberger license servers prior to the software installation. If you use any SIS 2014 release, you must upgrade your license server to make use of the new methods. The new methods will be installed along with SIS 2014.1. If you use any SIS 2013 release, you must upgrade your license server to make use of the new methods. The new methods will be installed along with SIS 2013.1. Tigertail Technologies Tigertail Technologies was an Australian software company that developed a technology to deliver software security to Microsoft Windows end-users. Tigertail was formed in 2001 to develop technology that it claims could be delivered in-the-cloud, alongside Microsoft Windows, to protect against the thousands of known and unknown vulnerabilities contained in Windows. The founders of Tigertail were John Sharples and Peter Duncan. Tigertail was an early participant in the Microsoft Security Response Center, joining in 2002. In 2004, a Tigertail white paper (published under the name Microsoft's Security Operations Center) recommended the creation of a centralised data-base of vulnerabilities and exploits, with Microsoft appointed to host the database.
