Q: How to store data on local storage for 3 months
I am using localStorage for storing some data like date of booking, hour booked etc. I want to store data for 3 months. Is it safe to use localStorage or any other way is there to store data like this. A:

You can use a cookie. A cookie expires after a certain amount of time. So it will not be stored for 3 months. There is a guide here: If you don't want to use cookies, you could look into databases such as IndexedDB. Q: how to use multiple taglib in a single java file? My library uses different tags. The problem is how to refer to different tags in a single java file? How can I create jar with this multiple tags? Here is my code: @SpringBootApplication
public class SerDeTestSpringBootApplication {
 public static void main(String[] args) throws
 Exception { ApplicationContext
applicationContext = SpringApplication.run(SerDe
 TestSpringBootApplication.class, args);
JpaTransactionManager transactionManager = appl

```
icationContext.getBean(JpaTransactionManager.cl
    ass); transactionManager.begin(); try {
ApplicationContext context = new ClassPathXmlA
pplicationContext("src/main/resources/META-
    INF/persistence.xml");
    ApplicationContextTestSupport testSupport =
(ApplicationContextTestSupport) context.getBean(
        "applicationContextTestSupport");
    TransactionFactory transactionFactory =
        testSupport.getTransactionFactory();
    EntityManagerFactory entityManagerFactory =
        testSupport.getEntityManagerFactory();
        EntityManager entityManager =
            entityManagerFactory.createEntity
```

May 12, 2011 â€” Well, you might be in luck with the new Chrome extension that lets you comment without your identity in Facebook comments. Defaceable allows trolls. In addition to "privacy" and "security", the new "Defaceable" extension makes it easy to edit comments to hide their identity from Facebook comments. According to Google, this extension not only makes comments on Facebook and Google more secure, but also more anonymous. "This extension only uses the Chrome extension and not the Google servers. This way, Facebook, Google, or any other platform can't access the comments. fffad4f19a
