With the release of AutoCAD in December 1982, Autodesk made the software available for purchase. For its first decade, the AutoCAD program remained the company's sole desktop CAD application. After a few years of success, Autodesk introduced a new desktop CAD product, ParaCAD, in 1995. After the introduction of the CADDY (CAD/Drafting System for the 21st Century), the company released a new AutoCAD in 2011. For purposes of the survey, we are interested in AutoCAD only. Downloads: What is the base level of Autodesk AutoCAD used by the largest percentage of designers? The base level of AutoCAD is a factor in this study because the lower the base level of a software application, the more highly developed and expensive the software is. AutoCAD is available in two different versions: All customers, who have purchased AutoCAD on a computer with a 32-bit Windows operating system, are required to upgrade to the new 64-bit version for free. However, not all current 32-bit installations of AutoCAD are necessarily compatible with the 64-bit AutoCAD standard. Why Is This Survey Important? Designing is a competitive profession, and software is an important tool for every designer. The decisions that Autodesk AutoCAD users make, either with the Autodesk help system, or independently, is influenced by price. Autodesk has released successive versions of its AutoCAD software over its 30-year history, and it is important to know the trends in AutoCAD software adoption and version use to understand the market. Surveys of Autodesk AutoCAD design tool users are a good way to gauge the current state of the market. Autodesk AutoCAD has a proprietary license format that it calls the AutoCAD Standard License. Autodesk also licenses the same software under three other license formats, called Classic, Design and BIM. The BIM license is intended for industrial design software applications. Data Data for this survey was collected from February 4, 2014 to March 31, 2014. The data is taken from customers of Autodesk who have purchased AutoCAD on a computer with a 32-bit operating system, and are upgraded to the 64-bit version for free. The 2013 survey is the most recent, but was not designed to reflect actual usage. The data for

Q: Why does str.split() seem to work differently in Python 3.2 than in Python 3.3? Please consider the following program from string import split def str_split(text): str_ = text.replace(' ', '') return split(str_) s = "hello world how are you" print str_split(s) In Python 3.3 this gives: [['hello', 'world', 'how', 'are', 'you']] Which is what I expect. In Python 3.2, it gives: [['h', 'e', 'l', 'l', 'o',", 'w', 'o', 'r', 'l', 'd',", 'h', 'a', 'v', 'e',", 'w', 'o', 'r', 'l', 'd',", 'h', 'e', 'y',", 'a', 'r', 'e',", 'w', 'o', 'r', 'l', 'd',", 'h', 'e', 'w',", 'a', 'r', 'e',", 'w', 'o', 'r', 'l', 'd',", 'h', 'e', 'y',", 'a', 'r', 'e',", 'w', 'o', 'r', 'l', 'd',", 'h', 'e', 'w',", 'a', 'r', 'e',", 'w', 'o', 'r', 'l', 'd',", 'h', 'e', 'y',", 'a', 'r', 'e',", 'w', 'o', 'r', 'l', 'd',", 'h', 'e', 'w',", 'a', 'r', 'e',", 'w', 'o', 'r', 'l', 'd',", 'h', 'e', 'w',", 'a', 'r', 'e',", 'w', 'o', 'r', 'l', 'd',", 'h', 'e', 'y',", 'a', 'r', 'e',", 'w', 'o', 'r', 'l', 'd',", 'h', 'e', 'w',", 'a', 'r', 'e',", 'w', 'o
