Photoshop element has been around since 2008 and has over 3 million users as of May 2018. It's a streamlined application for creating, editing, printing and sharing images in your own unique way. Anxiety and Avoidance Among Weight-Loss Participants Follow an Expanded Antecedent-Focused Intervention. Although research supports Expanded Antecedent-Focused Intervention (EA-Fi) as an efficacious psychological weight-loss treatment for those with eating-disordered psychopathology, only recent work has examined factors that can increase treatment success among participants with co-occurring eating-disordered psychopathology. The current study measured anxiety and avoidance, two factors considered important by EA-Fi users, among 40 weight-loss participants, 26 of whom were currently enrolled in EA-Fi. Participants showed substantial improvement on EA-Fi's effectiveness scales at posttreatment but not at 6-month follow-up, and they showed increases in anxiety and avoidance. Participants who reported higher anxiety at preintervention were more likely to show improved effectiveness at posttreatment. There were no significant interactions between improvement on effectiveness scales and preintervention anxiety or avoidance. The current findings provide preliminary support for using preintervention anxiety and avoidance to predict weight-loss outcomes among EA-Fi participants.

Q: Maven/Gradle: Running a specific profile using JUnit 5 I have a custom Maven/Gradle build toolchain and I'm trying to configure the integration tests so that they run only when a specific profile is active. With Maven, I can easily define a profile and run tests under that profile. This works fine for me because my integration tests are contained in a separate module. But I want the tests to be much more flexible, so I would like to make them work with Gradle too. Here is my build.gradle: group 'org.valyrie' version '2.0.4-SNAPSHOT' ext { edition = 'juno' } apply plugin: 'org.springframework.boot' apply plugin: 'io.spring.dependency-management' apply plugin: 'io.spring.project-structure.maven' buildscript { ext { springBootVersion = '2.1.5.RELEASE' } dependencies { classpath = springBootVersion } dependencies { compile group: 'io.spring.data', name:'spring-data-jpa', version: '2.3.2.RELEASE' testCompile group: 'org.springframework.boot', name:'spring-boot-starter-test', version: springBootVersion testCompile group: 'org.springframework.data', name:'spring-data-jpa', version: '2.3.2.RELEASE' testCompile group: 'com.h2database', name: 'h2', version: '1.4.193' testCompile group: 'junit', name: 'junit', version: '4.12' } task wrapper(type: Wrapper) { gradleVersion = '5.4.1' } configurations { givenApi() whenApi() } when { givenApi() } test {
