We already understand that we've seen some issues in some of the builds of your latests versions. We think these issues are due to the fact that we sometimes ship the 7.5.5 version to our WST customers before it is actually available in the Plug-ins site. The fix is going to be shipped on an automated basis, so in a couple of hours, you might be able to install the 7.5.6 version in your WST. In some cases, you might have to restart your WST machine for the installation to take place. Now, if you noticed something else, there is a bug in the version we are distributing right now, the 7.5.5.1 version. Some of you might have selected some languages that we are not yet tracking. In this case, we are going to distribute a patch shortly. Please note that the changes we are going to ship today have been tested to be secure, but it is always better if you are directly installing them on your machines.
