DriveEncryption is the best encryption solution. It's easy to use and allows you to encrypt USB Flash Memory Disk, Fixed Drive or Removable Storage. Maybe you have a lot of Movies, Audios, pictures, documents and want to protect them. Now Removable Storage is popular in the

world and easy to use. But do you know the data on them is not secure? Someone can access the data very easily! Now you get the way! DriveEncryption is the best solution. It's easy to use and can help you encrypt the disk drives which are using FAT or NTFS File System so faster that few seconds is enough for encrypting or decrypting 200GB Hard Disk.

DriveEncryption supports all kind of Fixed Drive and Removable Storage. For example, Hard Disk, USB Hard Disk, USB Flash Memory Disk, PCMCIA Hard Disk, PCMCIA Flash Card, Memory Stick, CF/MMC/SD/xD Memory Card, IDE Interface Memory Disk ON MODULE, Floppy/ZIP/JAZ Disk, etc. DriveEncryption can encrypt or decrypt

multi-disk at same time and only spends few seconds for each drive. The Encryption Algorithm is 256 Bits AES.

Here are some key features of "DriveEncryption":
[?] Almost support all kind of Removable, Fixed storage drive and Memory Card
[?] It has ability to encrypt for each Logistic Disk
[?] Encrypt or Decrypt multi-disk at same time [?]

Support all Windows File System : FAT12, FAT16, FAT32, and NTFS [?]
Encryption Algorithm : 256 Bits AES, High Security Level [?]
Supported Maximum Storage Capacity: No limits.

Support all drive in your Windows System
DriveEncryption Description: This invention is directed to a method for forming contours on a composition of

matter and a resultant product of such a method. More specifically, the invention is directed to a method of creating a solid feel, contoured foam surface in a plastic foam material. The use of plastic foam material is a very common practice. This foam material is generally used for a variety of different purposes, such as insulation for buildings, cushioning for furniture, packaging, and many other uses. In each of these uses the plastic foam material is generally molded into the desired shape, usually by a molding apparatus. An example of a molding apparatus is shown in U.S. Pat.

Windows 8/8.1/10/7/Vista/XP/2000, 128bit, 256bit. What is Max volume support? It is the maximum size of the volume that drive encryption can encrypt. But, it does not mean the maximum size of the volume that is physically available on the hard drive. The max volume is the physical capacity of the volume. There are a lot of useful files in the volume. It can not encrypt all files on the volume. But it can encrypt all used space. How to calculate maximum volume? If the drive is normally formatted in GPT, the max volume is the physical capacity of the volume. If the drive is normally formatted

in MBR, the max volume is $2^{28} = 2147483648$ bytes (1GB). How to get the max volume of the volume? Open gdisk, type "d" to list all the partition, then check the partition of the volume. If the volume is formatted in MBR, the number of physical sectors is $2^{20} = 1\text{M}$. If the volume is formatted in GPT, the number of physical sectors is $2^{10} = 1\text{K}$. Please note that the actual capacity of the volume could be less than the max volume due to reserved sectors or other kinds of fragmentation.
