What's New In?

Stopwatch for Windows that lets you record time and display it in a number of different ways, as well as a Countdown timer that lets you set start and end times. Stopwatch lets you record elapsed time and displays it as a single number or as a list of the main, list, and total units. Countdown timer shows the time you have left, and displays it as a single number or as a list of units. You can choose from several colorful themes, change the type of display, and use custom audio files. Both timers can be started, stopped, set to repeat, and reset to a custom time. It is possible to disable the sound for the display of elapsed time. When using the Stopwatch, you can activate a countdown timer with a 3-minute timer, or with a custom time expressed in seconds, minutes, and milliseconds. When using the Countdown timer, you can set the start time, the end time, the mode of display, and the period of repetition. It is possible to choose from various preset audio files or upload your own audio. The application uses less than 50 MB of disk space and does not consume much memory. ... 7.60 MB Keyboards/Keyboard Layouts - Qwerty Keyboard 4.0.7 Qwerty Keyboard is a professional keyboard tool that combines the convenience of the Qwerty-based layout with the usability of a modern keyboard.
