Lauren also returns to the screen to play an important role in the seventh season of the popular HBO drama. True Blood was released in 2007. Season 6 of True Blood will release on HBO in 2015. Aida Ticona is a powerful woman who has a broad network of influence in the vampire world. She has more than just her own family to worry about. Season 6 of True Blood focuses on Jessica and the troubles she has to deal with. It also introduces us to some new characters that could turn the vampire world on its head. Aida Ticona is also a descendant of Cleopatra, which is something quite unique. The last time a descendant of Cleopatra appeared on television, Cleopatra was the woman who was seduced by Julius Caesar. It is more than evident that Cleopatra is not going to be the one who awakens vampires in season 6 of True Blood. Earlier this year, it was announced that Rutina Wesley, who also stars on the HBO series Big Love, had joined the cast of True Blood. She plays a new character in 648931e174

Automotive Products and Services 40m resolution Autocom is a leading provider of diagnostic tools for cars and light trucks. We have designed products and services that bring together over 45 years of automotive product and engineering expertise. Diagnostic tools and smartphone applications We offer products and services that utilize our deep expertise in automotive electronics and systems design to create value for manufacturers, OEMs and repair facilities. We provide products and services that support diagnostics and system fault analysis, assist with crash analysis and provide detailed maintenance information. We deliver this information in electronic formats that make it easy to use in service operations or for remote diagnosis by smartphone. Mobile apps For mobile vehicles, we offer the Autocom Line and Dealer Center smartphone apps. These Apps are available for Android and iOS devices and provide car/light truck owners the ability to access up-to-date diagnostic and fault information on their own car or light truck. The Line and Dealer Center apps also allow dealers to more

easily access dealer and manufacturer service information. Accessories Accessories we provide include integrated car kits and complementary equipment, such as computer modules and power hubs. Our proprietary modules and power banks allow OEMs and dealers to quickly outfit their vehicles with the right diagnostic and accessory equipment. Technical Support Our contact center is staffed by dedicated technical support experts who are available 24 hours a day, 7 days a week to answer customer questions and assist with product troubleshooting. 1. Technical Field This invention relates to a method for producing an electronic part which is obtained by mounting electronic parts on a printed wiring board. The method for producing an electronic part according to the present invention is preferably applied to a multi-layered printed wiring board, which includes an electronic part having a plurality of metallic members, each of which is electrically connected to a bus bar which is formed of a metal foil and is one of conductive layers of the printed wiring board.

2. Background Art A multi-layered printed wiring board (hereinafter referred to as "intermediate board") is generally formed of insulating layers and conductive layers alternately laminated in sequence. In a case of a multi-layered printed wiring board, metallic members each of which is electrically connected to a bus bar which is one of the conductive layers, is generally mounted on each insulating layer. The metallic members are joined to the bus bars via solder layers. In a case where electronic parts are mounted on the multi-layered printed wiring board, the metallic members are also joined to the bus bars of the board via the solder layers. The solder layers are melted by a reflow process after electronic parts are mounted on the printed wiring board. In recent years, there has been a trend that the electronic parts mounted on the printed wiring board tends to increase in numbers. Therefore, for example, the number of metallic members which are mounted on each insulating layer has also increased. As a result, the number of solder layers which are melted by the reflow process has increased also. This causes the costs for mounting electronic parts on the printed wiring board to increase. In order to prevent the increase in the costs for mounting electronic parts, it is necessary that the reflow process is performed efficiently and swiftly.
